

Whether the application is commercial, for staff training in specific skills, for Continuing Professional Development, or purely academic for schools and colleges, eAssessment provides a flexible, consistent and secure method of assessing skills and knowledge.

Unlike many alternatives, in addition to one-off assessment of learning outcomes, eNet Assess $^{\text{TM}}$ also provides the ideal solution for repeat, or refresher assessment, where knowledge and competence must be re-tested periodically.

Industry leaders in this field, eCom Scotland, have developed their eNet Assess™ eAssessment engine to offer flexible and secure assessment, cost effectively, in all application areas.

Benefits of eNet Assess™ include:

- Flexibility in 'time and place'.
- Secure.
- Can be made 'on demand' or 'sit when ready'.
- Actively engaging students through rich media.
- Significant reduction in paper processing.
- Marking time greatly reduced and 100% accurate.
- Technology has a low carbon footprint.

Scottish Water

SCOTTISH

Scottish Water is a public body, responsible for water supplies and waste water across Scotland; a responsibility requiring thousands of staff in a wide range of disciplines.

Requirements

With staff working at many geographically diverse locations, Scottish Water management needed to provide continuous on-site training and assessment for these staff to ensure the efficient operation of all sites, and to comply with new statutory regulations.

In response to these requirements, Scottish Water brought in eCom Scotland to implement an enterprise-wide skills management system, including full eAssessment capability using the powerful eNet Assess™ assessment engine.

Solution

Using eNet Assess™, line-managers or appointed assessors can now assess and certify staff as competent in the required skills using any of several assessment methods, passing this information back to the SkillsLocker skills management system for production of evidence of competence of all staff as and when required.

Currently leaders in this field, Scottish Water are managing workforce competence effectively and efficiently using the eNet Assess™ assessment engine, providing significant operational cost-savings, and avoiding statutory compliance failures and consequent penalties.
